#### **DETAILED ACTION**

#### Election/Restriction

1. Upon review of the instant case, the application was deemed to contain claims directed to patentably distinct species of the claimed invention. Election from the following species is required. Note: applicant must elect *one* species from *each* subgroup below. Claim 28 is generic.

Subgroup 1: Species of molecule comprising an activated carboxylic acid component (see claim 28)

Applicant must elect, for the purposes of search, a <u>single species</u> of activated carboxylic acid component wherein all atoms and bond are shown that define said activated carboxylic acid component. Applicants must also elect a single species of carboxylic acid component, coupling additive and a coupling agent if used (e.g., see claim 29).

## Subgroup 2: Species of scavenger (see claim 28)

Applicant must elect, for the purposes of search, a <u>single species</u> of scavenger wherein all atoms and bonds are shown that define said scavenger (e.g., benzyl  $\beta$ -alaninate or a specific salt, see claim 39, polyamine). Applicants must further indicate whether said scavenger is an amine comprising a latent anion (e.g., see claim 31). Applicants must further indicate whether said scavenger bears a latent anion with a temporary protecting group (e.g., see claim 32) and if so indicate the structure and lability of said temporary protecting group (e.g., see claim 33). Applicants must also indicate whether said temporary protecting group is hydrogenolytically removable (e.g., see claim 34).

## Subgroup 3: Species of extractions (see claim 42)

Applicant must elect, for the purposes of search, a <u>single species</u> of extractions (e.g., sodium chloride, potassium nitrate). Applicants must further indicate whether the conditions are basic, neutral or acidic (e.g., see claim 43).

Subgroup 4: Species of organic solvent or mixture of organic solvents (see claims 28, 46)

Applicant must elect, for the purposes of search, a <u>single species</u> of organic solvent (e.g., ethyl acetate alone, mixture of ethyl acetate and dichloromethane, etc.

Page 2

Art Unit: 1639

2. Please Note: Applicants must disclose which claims read on the elected species (see

Page 3

paragraphs 5 and 6 below).

3. The species are distinct, each from the other, because their structures and modes of action

are different. They would also differ in their reactivity and the starting materials from which

they are made. For different species of method, the method steps for each species would differ.

Moreover, the above species can be separately classified. Consequently, the species have

different issues regarding patentability and represent patentably distinct subject matter.

Therefore, this does create an undue search burden, and election for examination purposes as

indicated is proper. For example, no core structure is provided for the molecule comprising an

activated carboxylic acid component nor is a core structure provided for the species of

scavenger. Thus, the claimed scope reads on virtually an infinite number of species falling

within virtually every class and subclass of molecules. Likewise, the species of extractions reads

on a large number of structurally unrelated compounds (e.g., sodium chloride, potassium nitrate)

and thus it would be a burden to search all the various permutations that would fall within this

claimed scope. Finally, the species of solvents also reads on virtually a limitless number of

unrelated compounds and mixtures thereof (e.g., ethyl acetate, dichloromethane, etc.).

4. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for

prosecution on the merits to which the claims shall be restricted if no generic claim is finally

held to be allowable.

Art Unit: 1639

5. Applicant is advised that a reply to this requirement <u>must include an identification of the</u>

species that is elected consonant with this requirement, and a listing of all claims readable

thereon including any claims subsequently added. An argument that a claim is allowable or

that all claims are generic is considered *nonresponsive* unless accompanied by an election.

Page 4

- 6. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. *If claims are added after the election*, *applicant must indicate which are readable upon the elected species*. MPEP § 809.02(a).
- 7. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
- 8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Because the above restriction/election requirement is complex, a telephone call to applicants to request an oral election was not made. See MPEP § 812.01.

Art Unit: 1639

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Page 5

10. Applicant is also reminded that a 1 - month (not less than 30 days) shortened statutory period will be set for response when a written requirement is made without an action on the merits. This period may be extended under the provisions of 37 CFR 1.136(a). Such action will not be an "action on the merits" for purposes of the second action final program, see MPEP 809.02(a).

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jon D Epperson whose telephone number is (571) 272-0808. The examiner can normally be reached Monday-Friday from 9:00 to 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James (Doug) Schultz can be reached on (571) 272-0763. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1235.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
